## 12X12

### COMSTOCK 12 X 12 DOUBLE DOOR TRAP

Model: C12DD-36

Model C12DD-36 is primarily used for raccoon, armadillo, porcupine, badger and fisher, but can be used for skunk, woodchuck, opossum and similar size animals. It weighs 16 lbs and measures 36" L x 12" W x 12" H. Set on its side, it may be used to take bobcat and fox. This rugged trap is made with strong, tight 1/2" x 1" mesh in 14 gage cage wire to keep raccoons from reaching into the trap if baited and then hold them once they are captured. This is a heavy duty professional trap with two trap doors. This trap is strong, reliable, durable, and requires little maintenance. It features super strong coil springs that power the trap door. The door locks into place which prevents animals from escaping, even if the trap is rolled over or flipped completely upside down. This trap is triggered by a swing bar wire trigger mechanism which allows you to capture the most trap shy animals and does not have a trip pan for animals to avoid.

### COMSTOCK 12 X 12 SINGLE DOOR TRAP WITH REAR BAIT DOOR

Model: C12BD-36

Model C12BD-36 is primarily used for raccoon, armadillo, porcupine, badger and fisher, but can be used for skunk, woodchuck, opossum and similar size animals. Set on its side, it may be used to take bobcat or fox. This rugged trap is made with strong tight 1/2" x 1" mesh in 14 gage cage wire to keep raccoons from reaching in for bait and hold them once they are captured. It weighs 16 lbs. and measures 36" L x 12" W x 12" H. This is a heavy duty professional trap with one trap door. The rear bait door, hinged at the bottom, easily flips down from the top allowing bait to be wired to the door if desired or simply dropped for animal removal. Original latch device prevents accidental escapes. This trap is strong, reliable, durable, and requires little maintenance. It features super strong coil springs that power the trap door. The door locks into place which prevents animals from escaping, even if the trap is rolled over or flipped completely upside down. This trap is triggered by a swing bar wire trigger mechanism

which allows you to capture the most trap shy animals and does not have a trip pan for animals to avoid.

## COMSTOCK 12 X 12 DOUBLE DOOR TRAP WITH 1.5" X 1.5" WIRE MESH

Model: CB12DD-36

Beaver/Otter 12" x 12" Double Door Trap. This trap is 36" L x 12" W x 12" H with 1-1/2" x 1-1/2" 12 gauge wire mesh. Like the larger 12" x 18" swim through Comstock Beaver Cage Trap, the 12" x 12" is designed for beaver/otter to be used in smaller runs, tighter spots, to be placed upside down, but will perform in any position. It will also take muskrats. Placed on land the 12" x 12" will take large raccoon, armadillo, otter, opossum, woodchuck, skunk, fisher, and like size animals and even bobcat.

## 9X11 DOUBLE DOOR MULTI PURPOSE

### COMSTOCK WIRE TRIGGERED (PAN-LESS) MULTI-PURPOSE TRAP

Model: C911MP

There are no traps more versatile than the Multipurpose 36" L x 11" W x 9" H Comstock Cage Trap with its built in 3-way nose cone! With two doors, this unique cage trap will capture animals coming from two directions in a trail situation. Utilizing a bottom opening in the nose cone, it will also capture animals entering or exiting dens, free standing, or up against structure. Unique, this trap with it's 3-way nose cone can accommodate up to two additional traps due to side flaps located in the 3-way nose cone. Also, because of side flaps, the trap can be placed both perpendicular or parallel to buildings, left or right. This trap is designed for woodchucks, skunks, raccoons etc.

\*Additionally, this multipurpose trap may even be attached upside down, sideways or at oblique angles to capture raccoon entering or existing buildings.

## COMSTOCK CAGE ACCESSORIES

### Comstock Cage Accessories

#### NOSE CONE FOR MODEL C6626 - 7L X 6.5W X 6.5H

##### Model: C668

Model CN668 is a nose cone designed to be used with the model C6626 trap for bait-less, positive setting over virtually any rodent hole to capture animals exiting or entering. The nose cone can be placed over holes in the ground to capture chipmunks and ground squirrels or secured to buildings over entry holes in any position. This nose cone can be rotated to accommodate holes in walls, attached either left or right as well as attached to overhead openings from above in soffits or ceilings. With dual flaps that can be used separately or together, this unique nose cone was purposely engineered to fit over hard to reach corner holes quickly, saving both time and money with wire fabrication associated with connecting double door traps to entry holes.

## “V” SETTERS FOR COMSTOCK CAGE POWERED DOORS

Model: CDS

This small, light weight, simple setting tool in a “one size fits all” configuration is designed to work with all of the Comstock powered door cages with 9x11, 12x12 and 12x18 inch openings, yet it weighs only 6 ounces. By adding a great deal of leverage, this handy setter not only makes setting the Comstock powered door cage traps fast and easy, it allows for the safe release of captured animals too. The handle keeps your hand up and out of the way, well above the trap as the animal exits the cage. Of course, Comstock cages do not require the use of a setting tool, this just makes setting easier and releasing animals safer.

Note: If setters are not used, a Tomahawk cage separator tool can be used to keep the animal away from the door while using a single rod to hold the door of the Comstock Cage traps open.

Directions for use:

SET CENTER SWING BAR TAB, SQUEEZE HANDLE TOGETHER ON SPRING LOADED SETTERS AND PLACE SETTER AS SHOWN ON CAGE DOOR LOCK BAR , SIMPLY LIFT WITH ONE HAND AND LATCH DOOR HOOK ON TRIP ROD TAB.

## FLUSH MOUNT ADAPTER FOR ALL 9X11 COMSTOCK SERIES TRAPS

Model: C911FMA

Flush mount cage traps encapsulate a door in the set position so that when the trap is fired the door is free to close without interference. Available from the factory, Comstock offers flush mount traps with one flush mounted "internal door" and one standard "external door." Providing more versatility, flush mount cage traps are great for positive setting at den sites or against flat surfaces. For those who own standard Comstock 9" x 11" cage traps with 2 external doors, but have a need for a flush mount trap, this handy money saving, flush mount attachment will transform a standard Comstock trap into a flush mount trap quickly and easily without purchasing another trap. With clips or hog rings the four flaps can be clipped into position to form a solid weld-like bond. Ruggedly made with 1/4" round rod framing at each end, this unit can be attached or removed at will. Though one flush mount unit is all that is necessary in most cases, flush mount units can be attached to each end of double door traps.

## NOSE CONE FOR MODEL C5524 - 7L X 5 ½W X 5 ½H

Model: CN557

Model CN557 is a nose cone designed to be used with the model C5524 swing panel trap for positive set mounting over virtually any rodent hole to capture animals exiting or entering. The nose cone can be placed over holes in the ground to capture chipmunks and ground squirrels or secured to buildings over entry holes in any position. This nose cone can be rotated to accommodate holes in walls, attached either left or right as well as attached to overhead openings from above in soffits or ceilings. With dual flaps that can be used separately or together, this unique nose cone was purposely engineered to fit over hard to reach corner holes quickly, saving both time and money with wire fabrication associated with connecting double door traps to corners entry holes. This accessory measures 7L x 5.5W x 5.5H and is constructed of 1/2x1 wire mesh.

## 3-WAY NOSE CONE / SPLITTER FOR 9X11 TRAPS

Model: C911SP

A time saver, the 3 way nose cone splitter may be used at free standing den sites or dens under or against buildings etc. to direct animals into double door Comstock Cage Traps. When used with a single trap, the splitter allows for three choices in trap placement, covering 270 degrees, where obstacles are present, a must for the ADC trapper. In open areas from one to three traps may be placed at a single den site for multiple catches in a single night to shorten the time to complete a job (Best when used with Comstock metal nose cones or flush mount cage traps). In addition, the 3-way splitter may be attached anywhere on buildings where raccoon are entering with Comstock Double Door Cage Traps to capture animals entering or existing in much the same way as on the ground for woodchucks and skunks, under, on top or sideways.

## CHIMNEY ADAPTOR

Model: C911CA

Designed to be used primarily with standard 30" or 36" long 9" x 11" Double Door Comstock Cage Traps or will work with single door Comstock Cage Traps. Four flaps clip onto the body of the cage trap quickly and easily to form a rock solid unit. The 18" Long portion at 5" x 9" adapter slides into the chimney for stability. It is designed to accommodate both small and larger chimneys in order to capture raccoons exiting or entering when used with double door Comstock Cage Traps. \*Also, where there are recessed or small entry points on a building, the adapter can be attached to a 9" x 11" Comstock Cage Trap and slid into place to work as a nose cone to direct animals into traps.

## COMSTOCK T-BAR SETTIN' STICKS

Model: CSticks

These heavy duty, indestructible trap setters are designed for 330 sized, 10" and larger body gripping traps. Made from solid 5/8" steel rod, these setters are but 15" long, and yet offer plenty of leverage to set the most powerful body gripping traps like Belise, B.M.I. and others. With a swiveled chain joining the T-Bars together to prevent loss, they won't tangle and can easily be carried out of the way over a shoulder or around your neck while hiking.

## PLASTIC TRAP COVER FOR 7 X 7 TRAPS

Model: PC105

Trap Covers are great for protecting captured animals from the elements. They also hide trapped animals so people passing by don't see them and become alarmed. The trap cover can be left on the trap when transporting the animal, giving you added protection. Covers also have a calming effect over most trapped animals. Our plastic trap covers are made from .090 low density polyethylene. They are durable, easy to clean, and fold flat for easy storage. This cover fits all 7" x 7" trap models which includes the C7732 and C7736.

## C911NC-18 - SHEET METAL NOSE CONE FOR 18" COMSTOCK CAGE TRAPS WITH STANDARD TRAP DOORS

Model: C911NC-18

This handy multi purpose accessory was made to fit over the 9x11x18 Comstock Cage Traps and bring capture time to a minimum for den animals like woodchucks, skunks, armadillos. For transport, the nose cone fits over the cage, taking up no extra room. With no less than 3 uses, the nose cone can be used to direct animals into Comstock Double Door Cage Traps at den sites, either at free standing dens sites or dens located up against structures. When placed sideways against structure, either one or two traps may be used. Secondly, when using bait with either single or double door Comstock Cage Traps, the solid nature of the nose cone prevents animals from reaching in to remove bait. Third, when skunks are captured, the metal nose cone will all but eliminate problems from spraying. Additionally, covered animals are more protected from harsh sunlight, rain and snow. This accessory measures 18L x 9.5W x 11H and is constructed of galvanized sheet metal with a 1x1 wire mesh flap.

## C1212FMA - FLUSH MOUNT ADAPTER FOR ALL 12 X 12 COMSTOCK SERIES TRAPS

Model: C1212FMA

Convert any Comstock 12x12 trap into flush mount trap with this adapter. When a trap is set with the door open, the door extends a few inches past the trap frame which prevents it from being flush mounted. However, flush mount adapters extend the length of the trap past the open door, allowing the trap to be mounted flush against a wall or any other structure. To use, place the flush mount adapter in position against a wall and over the animals den opening. Model C1212FMA measures 7L x 12W x 12H and is constructed of 1x1 - 14 gauge wire mesh.

**SKU:** C1212FMA

**Price:** \$31.75

## ESCAPE DOOR KIT

Model: CED

Model CED is the Comstock Escape Door Conversion Kit. This kit allows you to convert your Comstock Beaver or 12x12 trap to include an escape door. The escape door allows non-target animals such as otter to escape from the trap without injury. The kit includes a mesh panel door, spring lock, and j-clips. You will be required to cut a 4½ x 4½" opening in the bottom of your trap and install the mesh panel door. The door is 7½ x 6", the spring lock allows you to lock the mesh panel door open or closed, and the j-clips allow you to attach the mesh panel door to your trap. Cut your escape door opening on the bottom of the trap near a corner where the closed trap door rests on the trap. Trapped animals will easily find the open release door because they tend to go toward corners of the trap to try and escape. Detailed instructions are included with this kit.

## CUSTOM MADE PRODUCTS BY JIM

### COMSTOCK BI-FOLD BOBCAT/FOX

" PHONE" OR "EMAIL" ORDERS ONLY

The newly developed specialty, wire triggered, panless bobcat/fox live cage traps are currently being made to order by Jim in the New York shop, offered in single and double door models in three sizes. A truly unique fast closing live cage trap, these one of kind devices, only through Comstock Cage Traps, incorporate spring powered, bifold doors. The design provides internal doors that hinge at the top and fold at center to rest up against the roof of the trap internally when the trap is in the set position. Unlike other bobcat traps with external guillotine doors that extend well above the frame, these traps have "zero" clearance because nothing extends beyond the confines of the trap body itself with no parts to catch or foul on brush. These traps can be placed in tight places and small culverts. Additionally, this means they are flush mount.

Exhibiting characteristics found in no other cage traps, the traps are the only powered door cage traps that nest for shipping and transport and also the only double door bobcat traps that will nest. In freeze/thaw wet and cold weather conditions the bifold door traps can be easily covered to function perfectly without risk of freeze up when snow or rain turns to ice. Because of the powered doors, the traps have proven themselves to be reliable by remaining closed even in roll over situations.

\*\*\*No cause for worry. The double door traps have been designed so that "single firing" of a double door trap or "staggered firing" is not an issue. Both doors drop together every time.

\*\*\*Because of the versatility of these traps, Comstock bobcat traps have been used to take beaver, while at the same time Comstock beaver traps have been used to take bobcats.

The **double door** Bi-fold cages come in sizes:

38.5 x 7.5 x 15	\$155.00
38.5 x 9 x 18	\$ 165.00
38.5 x 10.5 x 21	\$ 175.00
38.5 x 12 x 24	\$ 185.00

The **single door** Bi-fold cages come in sizes:

37.25 x 7.5 x 15	\$115.00
37.25 x 9 x 18	\$ 120.00
37.25 x 10.5 x 21	\$ 125.00

## COMSTOCK LOCK RING BOBCAT/FOX

" PHONE" OR "EMAIL" ORDERS ONLY

These useful, fast closing, wire triggered, panless bobcat/fox live cage traps are currently being made to order by Jim in the New York shop, offered in both single and double door models in four sizes. Utilizing the time proven lock ring, door lock system that has been in service for decades, Jim re-engineered the standard design by angling the door so that springs could be used to power the doors for much faster closing. It should be noted that once lock rings begin to drop they only need to fall but a few inches to begin the irreversible door locking. In the set position, like standard lock ring door traps, the doors extend straight out horizontally from the body of the trap parallel to the ground. As the powered doors close in a sweeping motion, animals are “persuaded” to move forward as they are pushed into the compartment in a trap that will lock quickly.

\*\*\*No cause for worry. The double door traps have been designed so that “single firing” of a double door trap or “staggered firing” is not an issue. Both doors drop together every time.

\*\*\*Because of the versatility of these traps, Comstock bobcat traps have been used to take beaver, while at the same time Comstock beaver traps have been used to take bobcats.

Utilizing the time proven lock ring, door lock system that has been in service for decades, Jim re-engineered the standard design by angling the door so that springs could be used to power the doors for much faster closing. It should be noted that once lock rings begin to drop they only need to fall but a few inches to begin the irreversible door locking. In the set position, like standard lock ring door traps, the doors extend straight out horizontally from the body of the trap parallel to the ground. As the powered doors close in a sweeping motion, animals are “persuaded” to move forward as they are pushed into the compartment in a trap that will lock quickly.

\*\*\*No cause for worry. The double door traps have been designed so that “single firing” of a double door trap or “staggered firing” is not an issue. Both doors drop together every time.

\*\*\*Because of the versatility of these traps, Comstock bobcat traps have been used to take beaver, while at the same time Comstock beaver traps have been used to take bobcats.

#### **Comstock Lock Ring Door Cage Single Door**

Single Door Small - 7.5 x 15 x 36	<b>\$95.00</b>

## SPECIALTY COMSTOCK CAGE TRAPS

Raccoons, Mountain Lions

### COMSTOCK CHIMNEY TRAP

Model: C59CHIM

Model C59CHIM is a trap designed to capture raccoons living in chimneys, to be dropped into a chimney from the top, and completely hidden from sight. It consists of the trap, trap flap, trap flap chain, trap stop, and chimney top mesh screen. The trap stop allows you to drop the trap into the chimney at any depth you prefer, the chimney top mesh screen will rest under the trap stop to prevent raccoons from entering the chimney and avoiding the trap. The trap flap will prevent raccoons from exiting the chimney and avoiding the trap. To save on shipping and space in transit, all the components fit nicely inside the trap until it is ready to be set. Once the trigger mechanism is set with the trap stop in place, the trap can be dropped into the chimney. Made light in weight and compact to be carried up ladders, this trap at 30 inches long weighs only 9 lbs.. This trap features our Comstock powered door that closes from the outside in rather than inside out. Our stable, patented trigger bar will withstand jarring, but when pulled by a raccoon, will fire easily. This trap measures 30L x 5W x 8H and is constructed of 1/2" x 1" wire mesh.
